Retrievals and Transfers at The Center For Reproductive Health

Vaginal Oocytes Retrievals and Embryo Transfer
VOR

During your retrieval a needle will pierce the wall of your vagina and each of your ovaries. The needle will aspirate each of your stimulated follicles in order to retrieve your oocytes.
Vaginal Oocyte Retrieval
Embryo Transfer

- During your transfer your embryos will be loaded into the catheter by the embryologist. Then Dr. Robins will pass the catheter through your vagina, through the cervix and into your uterus.
Embryo Transfer

- Fallopian Tube
- Uterus
- Embryo
- Ovary
- Cervix
- Vagina
- Catheter
